

Declaration of no calibration necessity for FlowMIR Disposable Turbines

MIR – Medical International Research S.p.A. as manufacturer of FlowMIR Disposable Turbines

DECLARES THAT

After assembling the parts, the FlowMIR Disposable Turbines are tested using a Digital Flow Tester before being packed.

Every turbine is individually tested by measuring the accuracy of the turbine's response. The acceptability criterion complies to the standard related to flow measurement (ISO 23747).

If this test is passed, the turbines are packaged to guarantee hygiene and to protect it from eventual external contamination up until it will be used.

The above therefore guarantees the accuracy of every single unit of FlowMIR Disposable Turbines produced.

For these reason, FlowMIR Disposable Turbines do not require a calibration session before the spirometry test.
